COMMENTARY

The major equity market indices continued to make new all-time highs during the month of February, but it was no longer the “Magnificent 7” driving all the gains. Certainly a few of them helped but resilient economic data and relatively better-than-expected earnings helped give investors additional confidence to broadly push equities higher. Positive economic data has become a precarious thing; on one hand it’s supportive for a healthy economy but on the other, the strength has investors wondering if will give the Fed confidence to keep interest rates higher for longer. Fixed income, which had done tremendously well since late 2023, sold off slightly during February as investors’ expectations for rate cuts moved further out.

During February, the Amplify CWP Enhanced Dividend Income ETF (DIVO) returned 2.33% while the benchmark, the S&P 500 TR Index, returned 5.34% and the CBOE S&P 500 BuyWrite Index returned 1.93%. The Financials sector (+4.59%) contributed most significantly to the Fund’s return for the month along with Information Technology (+3.08%) and Consumer Discretionary (+4.21%).¹ Communication Services (-5.50%) contributed the least to the return during the period followed by Materials (-3.64%). Positions that contributed most significantly included Caterpillar (CAT), Home Depot (HD) and Walmart (WMT). Positions that detracted most from returns in February included UnitedHealth (UNH) and Verizon (VZ).

The Fund did not add any new positions during February but was active in adding to and trimming from existing positions. Cisco (CSCO) and JP Morgan (JPM) were added to after being partially called away at expiration mid-month. CME Group (CME) and Marathon Petroleum (MPC) were added to while reducing some exposure to Deere (DE) after it had a strong run.

From an options standpoint, we were active and tried to capture premium as volatility picked up periodically throughout the month. We sold new calls during the month on Apple (AAPL), Caterpillar (CAT), Cisco (CSCO), Goldman Sachs (GS), Marathon Petroleum (MPC), Merck (MRK), Microsoft (MSFT), Procter & Gamble (PG), Visa (V) and Walmart (WMT). While most of those calls expired during the month, we were partially called away on Cisco (CSCO) and JP Morgan (JPM).

The portfolio held a total of three covered calls² at the end of February 2024: Microsoft (MSFT), Procter & Gamble (PG) and Visa (V). At the end of the month, approximately 2.1% of the portfolio was covered.

YIELD

Distribution Frequency: **Monthly**

Distribution Rate: **4.84%**

30-Day SEC Yield: **2.02%**

Distribution Rate is computed as the normalized current distribution (annualized) over NAV per share. In addition to net interest income, distributions may include capital gains and return of capital (ROC). Please click [here](#) for more information. **30-Day SEC Yield** is a standard yield calculation developed by the Securities and Exchange Commission that allows for fairer comparisons among bond funds. It is based on the most recent month end. This figure reflects the income earned from dividends – excluding option income – during the period after deducting the Fund’s expenses for the period.

Fund inception date: 12/14/2016. *DIVO's gross expense ratio is 0.55%. The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. Short-term performance, in particular, is not a good indication of the fund's future performance, and an investment should not be made based solely on returns. For performance data current to the most recent month-end please visit AmplifyETFs.com/DIVO. Brokerage commissions will reduce returns. A fund's NAV is the sum of all its assets less any liabilities, divided by the number of shares outstanding. The closing price or market price is the most recent price at which the fund was traded.*

Index Definitions: All indexes are unmanaged and it's not possible to invest directly in an index. **S&P 500 Total Return Index**—market-capitalization-weighted index of the 500 largest U.S. publicly traded companies by market value, and assumes distributions are reinvested back into the index. It does not include fees or expenses. **CBOE S&P 500 BuyWrite Index (BXW)**—tracks the

performance of a hypothetical buy-write strategy on the S&P 500 Index. A “buy-write” strategy is generally one in which an investor buys a stock (or basket of stocks), and also writes covered calls that correspond to those holdings.

DIVO differs substantially from the S&P 500 Index and CBOE S&P 500 BuyWrite index, which are used for comparison purposes as widely recognized measures of U.S. stock market performance. While the returns of DIVO have exhibited positive (but varying) correlation to the indexes over time, DIVO may invest in different stocks and in different proportions than in the S&P 500 index and CBOE S&P 500 BuyWrite index.

¹All percentages shown indicate total return of the sector for the month.

²A covered call refers to a financial transaction in which the investor selling call options owns an equivalent amount of the underlying security.

THIS MATERIAL MUST BE PROCEEDED OR ACCOMPANIED BY A [FUND PROSPECTUS](#). Read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. You could lose money by investing in the Fund. There can be no assurance that the Fund's investment objectives will be achieved. Covered call risk is the risk that the Fund will forgo, during the option's life, the opportunity to profit from increases in the market value of the security covering the call option above the sum of the premium and the strike price of the call, but has retained the risk of loss should the price of the underlying security decline. The Fund may invest in mid-capitalization companies. This may cause the Fund to be more vulnerable to adverse general market or economic developments because such securities may be less liquid and subject to greater price volatility than those of larger, more established companies. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results.

The Morningstar Rating™ for funds, or “star rating”, is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. DIVO received 5 stars among 78 funds in the Derivative Income category for the overall, 4 stars for the 3-year, and 5 stars among 71 funds for the 5-year periods ending 12/31/23.
